Presentation of company

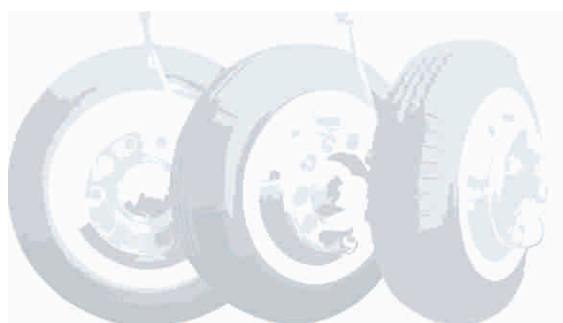

The launching of Jomar Indústria e Comércio de Calibradores' new catalogue of parts, accessories and components is the opportunity we have for showing our customers, partners and friends the work and the resulting fruits of our continuous efforts in researching, designing, developing and applying new technologies to this market segment.

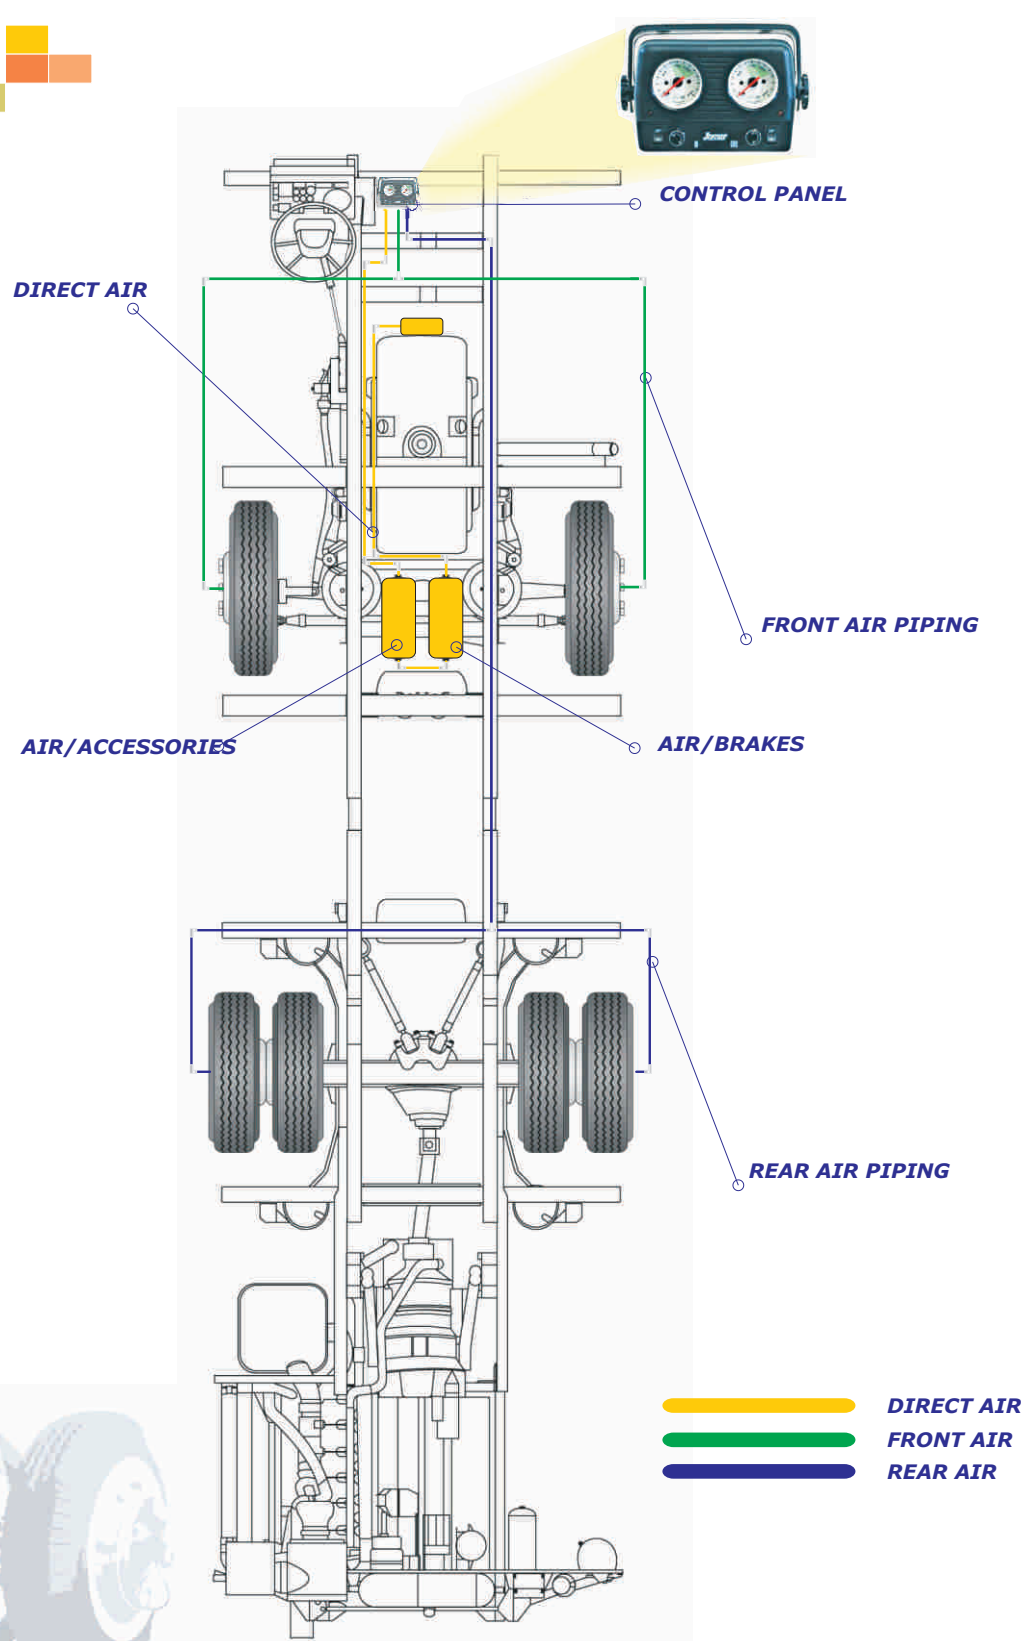

Jomar Indústria de Calibradores was created in 1997 dedicated to the development and manufacture of bus and truck tire automatic pressure calibrating gauges in order to meet our customers' greatest needs. We have a wide range of accessories from the smallest component to heavy-duty items.

Although still young in the market, Jomar counts on all Jomatic Tornearia de Precisão's technology, a company within the same group intended for supplying machined parts for the most renewed companies in the country, on different segments, such as: automotive, electronic, information technology, home appliances, civil building, among many others. With more than 20 years in the marketplace, Jomatic provides Jomar Calibradores with essential elements such as qualified labor and last generation equipment.

TRUCK MONITOR System

*Automatic Monitoring.
It corrects the tire's pressure,
keeping it adequate to spin,
regardless of the temperature: cold or warm.*

**The control is now
on your hands!**
